SUMMARY

Computer Science (AI & ML) student with a CGPA of 8.8, passionate about building real-world sol

WORK EXPERIENCE

COLLEGE PROJECTS & HACKATHONS

ATRIVA

- Developed an AI-driven ICU crisis intelligence system for real-time patient monitoring
- Processed multimodal healthcare data (ECG, vital signs) for analysis
- Implemented predictive models to detect early signs of patient deterioration
- Designed a scalable architecture using federated learning concepts
- Focused on improving clinical decision-making and reducing response time

Auriva

- Built an AI-powered accessibility solution to enhance digital usability
- Developed intelligent features to assist users with diverse accessibility needs
- Improved navigation and interaction through adaptive system design
- Focused on creating an inclusive and user-friendly experience

ARGUS

- Developed an intelligent monitoring and analytics platform
- Implemented real-time data tracking and anomaly detection
- Generated actionable insights for faster decision-making
- Focused on improving system efficiency and reliability

RAIN

- Created an AI-based environmental monitoring system
- Implemented rainfall prediction and climate analysis models
- Processed environmental data to generate insights and alerts
- Focused on enabling better planning for weather-dependent activities

CampusSync

- Designed and developed a full-stack campus management system
- Implemented authentication with role-based access (student, admin)
- Built secure login with device-based restrictions
- Developed QR-based attendance tracking system

EDUCATION

I am currently pursuing a Bachelor of Technology (B.Tech) in Computer Science (AI & ML) at Karu

SKILLS

HTML, CSS, JavaScript, React, SQL, C Programming, Python, Internet of Things, Git, GitHub, API
